

Films & Tubes

We offer an extensive range of films and tubes, including shrink film, mailing film, flame-retardant scaffold wrap and lay flat tubing. Our products are guaranteed to give you superb strength and performance right across the range.

As well as standard polythene, you can order our extensive range of films and tubes in the following materials:

A 100% recyclable, tough, lightweight film that offers outstanding strength at lower gauges and reduces the weight of polythene consumption and thus the cost by up to 20%. Polylite films are supplied using a multi-layer co-extruded material that provides a thinner gauge with incredible strength.

Eco-friendly polythene that is oxy-degradable in just 2–3 years. This material contains **d₂w**® additives that break down the carbon–carbon bonds within the polythene, leading to much faster deterioration than normal polythene.

Films & Tubes

Additives

Specialist additives and treatments

- Non fusion/Low fusion
- Micro/Macro perforated
- Embossed
- Non slip/Anti slip
- Anti static
- Corona treated
- Low melt
- Printed
- UV stabilised
- Coloured
- Flame retardant
- Frost resistant

We supply an extensive range of films and tubes in a huge variety of sizes from 250mm wide collation shrink film to 12 metre wide industrial shrink film – suitable for wrapping modular buildings.

We offer an exceptional choice of plain and printed products for all your pack collation requirements. Our shrink-wrap films are ideal for the food and drink sectors, among others. They help ensure the safe transportation, storage and display of products and easy collation of a number of items within one pack. Our lightweight and low-cost collation shrink-wrap films shrink to fit using standard heat processes, holding products both securely and economically.

Our lay flat tubing gives you the opportunity to effectively create your own bags. Supplied as a flexible, continuous roll of polythene sleeving open at one end, it is available in various widths and lengths and can be gusseted should you require additional capacity. It provides an economical and easy way to package or enclose objects of same width but various lengths. It is ideal for packaging odd shaped or long items. Simply insert your product into the tubing, cut it to the required length and heat seal, staple or tape one or both ends.

Mailing and polywrap films come in a wide range of weights and can be supplied either plain or printed. This film offers the best solution for dispatching your products – unlike envelopes they are water resistant and lightweight, saving both time and money.

Contact our helpful sales personnel to find out more about our extensive range of films and tubes and how you can benefit from choosing the best material to ensure you enjoy both cost and environmental savings.
